

Task One: Check 'codepen low fidelity wireframe.png' in this directory.

Task Two: timmyomahony.com uses the colors black (in rgb 0 0 0) as the color for the text and icons and it uses red (rgb 234 80 56) for the borders, hovers and the text in most links

Task Three: Brian is able to browse and watch content on youtube.com. He will be able to post text messages, he'll be able to thumbs up or down other posts or videos. Brian is also able to post his own content to the website, as well as report inappropriate content.

Task Four:

1-facebook: facebook's prime objective is social, where the users will be deep in the system, having accounts, making posts.

2-twitter (currently X): the prime objective is social in nature as well. People will be sharing posts however, they'll also share links that point to all sorts of pages.

3-google: google's prime objective is very different from those, as it is not social at all and you don't expect your users to have accounts. In this case, the prime objective is to generate links to other websites.

4-youtube: this page's prime objective has a lot to do with their database, as it'll be serving videos that users watch as they stay in the page.
